SUMMARY

Full-stack developer focused on building scalable systems, real-time applications, and developer-first tools. Strong emphasis on clean architecture, performance, and end-to-end ownership of products.

EXPERIENCE

- **TB10 Platform (Game Infrastructure)** Remote
Full-stack Developer Feb 2026 – Present
 - Architecting and developing a full-stack tournament platform, owning frontend, backend, and system design end-to-end.
 - Built a high-performance frontend using React and tailwindCSS.
 - Engineered backend services in Node.js for game logic, APIs, and scalable workflows.
 - Implemented real-time state synchronization for interactive, multiplayer-style experiences.
- **Blolabel** Remote
Full-stack Developer Nov 2024 – Feb 2025
 - Built a document annotation platform supporting structured labeling, editing, and layered metadata.
 - Developed interactive interfaces for creating and managing annotations with real-time feedback.
 - Designed backend systems for document storage, annotation workflows, and scalable data handling.
 - Implemented HLS-based video processing pipeline using AWS S3 and MediaConvert for chunked upload, streaming, and efficient playback.
 - Integrated AI-based audio filtering using Cleanvoice to enhance audio quality and remove noise artifacts.
- **Octasol** Remote
Freelancer – Escrow Workflow Jul 2025 – Aug 2025
 - Integrated escrow-based GitHub workflow and developed Solana smart contracts for secure payments.
 - Worked with core team on on-chain execution, testing, and workflow automation.

EDUCATION

- **M.S. Ramaiah Institute of Technology** Bengaluru
B.Tech – Computer Science Engineering 2023 – 2027

PROJECTS

- **Okito – Web3 Infrastructure** 2025
 - Built developer-focused SDKs and APIs for Solana apps, including wallet integration, payments, and escrow systems.
 - Focused on type safety, modular design, and improving end-to-end developer experience.
 - Ranked at a top place in a hackathon organised by 100xDevs on Superteam. [Result]
- **DropLert – Real-time Notifications** 2025
 - Developed a customizable real-time notification system (toast, modal, alerts) with theming and flexible configuration.
 - Published as an npm package with simple plug-and-play integration for modern frontend applications.
- **DecentraWork – Freelance Marketplace** 2024–2025
 - Built a decentralized freelance platform enabling trustless client–freelancer collaboration with escrow-based payments on Solana.
 - Implemented real-time chat, project workflows, and role-based interactions between users.
 - Designed secure escrow settlement logic ensuring transparent and reliable transaction flows.
